EXPERIENCE

Software Engineer

Genpact

July 2022 - Present, Bangalore

- Collaborated on the development of an **Enterprise Planning and Budgeting System** for **Warner Bros Discovery Media**, contributing to design and integration within the **Oracle Enterprise Management Suite** to ensure consolidated data management.
- Played a key role in **design decisions** for building and structuring **data models** to facilitate comprehensive business planning.
- Crafted complex **SQL queries** for **data cleaning, transformation, and ETL** processes, ensuring robust, organized datasets across financial models.
- Developed **Python scripts** for automating repetitive tasks like **user creation, deletion, and password updates**, improving operational efficiency and security.
- Automated critical workflows through **Redwood jobs** and leveraged **EPM Automate** to streamline **task scheduling, data backup management**, and **financial data imports/exports**.
- Built interactive **React.js** and **Node.js** dashboards to visualize **business planning data**, enhancing client understanding and engagement.
- Conducted rigorous **API testing with JavaScript**, validating data accuracy, ensuring **metadata integrity**, and verifying **workflow execution** in financial models.
- Worked cross-functionally to facilitate seamless deployment, providing technical mentorship to interns on a **MERN stack project** ("NovaFit") covering **Node.js, Express.js, React.js, and MongoDB**.

Intern

IBM

January 2022 - June 2022, Bangalore

- Contributed to a team that led the clinical data integration for “Horizon Blue Cross Blue Shield New Jersey” client .
- Used Apache Nifi to automate data flow from various data vendors. Loaded the data into Hadoop distributed file system (HDFS) . Wrote spark jobs in python to apply business rules on the data. Used Hive to run SQL-like queries to validate the data for downstream consumption.

SKILLS

Programming - Python , JavaScript

Front End - React.JS , Tailwind CSS , HTML , CSS , Bootstrap , Context API , React Bootstrap , Styled Components.

Back End - Node.JS , FAST API , Amazon Web Services (AWS) , Firebase , Supabase , JSON .

Database & Tools - SQL , MongoDB , Oracle EPM , Oracle EDMCS, Git , Github , REST API , JIRA , SmartView, CI/CD.

PROJECTS

The Wild Oasis

the-wild-oasis-baba.netlify.app/login · January 2023 -May 2024

- An internal hotel management app enabling users (hotel employees) to create, delete, and update cabins, check in and out guests, and access statistics such as bookings, stays, and occupancy rates.
- Developed as a fullstack project, the frontend is crafted with React.js and Styled Components, while the backend leverages Supabase for authorization, authentication, and data storage, facilitating API calls. React Query manages remote state, while Context API handles UI state. React Forms streamlines form management, with additional tools like Recharts and React Hot Toasts enhancing functionality. The project is hosted on Netlify, supporting CI/CD (continuous integration and continuous delivery/deployment) for seamless deployment.

Fast React Pizza Co.

<https://github.com/ManojMaheshPatil/Fast-React-Pizza>

- Fast React Pizza Co., a professionally crafted website offering an extensive pizza menu selection. The project used Advanced React, Redux, and Tailwind CSS to build a seamless ordering experience.

MyBlog

github.com/ManojMaheshPatil/blog-api-v1

- Developed a complete API for a blog with all the CRUD operations. Implemented all the backend features required for a blog to work. Used NodeJS as the programming language
